Natalia Maximova: Adsorption of Lignin and Lignin/Cationic Polymer Complexes on Cellulose Fibres and their Effect on Sheet Properties

– in Abstract, the last sentence should read:

They adsorb onto cationised substrates in the form of individual granules, consisting of about **1200 primary lignin particles** that are held together by strong cohesive forces.

– on page 62, the 4th sentence in the last paragraph should read:

This means that granules observed in AFM images were likely composed of about **1200 primary lignin particles** held together by strong cohesive forces.

– on page 73, the 2nd sentence in the 3rd paragraph (concluding remark 10) should read:

The individual granules are lignin agglomerates, consisting of about **1200 primary lignin particles** that are held together by strong cohesive forces.
