Figure 5 on page 5 does not properly show the messaging paths between HQ and site A. Two paths should be visible; one via ISP 1 and other via ISP 2. Figures 9 and 10 are not referenced; in Section V, Subsection C, Figure 9 is about the studied "full scenario", and Figure 10 about the "potential worst-case scenario". The header in Figures 8, 9 and 10 should be "Average throughput of single flow, 2x20 + 1x10 flows, 7Mbps and 4Mbps links".
