Errata

Publication I

Missing $\pi$ in (15). The conversion gain should be $\text{sinc}(\frac{\pi T_{tr}}{T_c})$.

Publication II

The average added power consumption per antenna is 11–19 mW. The target angle in Fig. 5 is 59 degrees, not 60.

Publication IV

The MUX at the LO divider output implements delay tuning steps of $T_{LO}/4$, not $T_{LO}$.
