In the original publication in the Figure 5 wrong XRD diagram was printed. The correct Figure 5 is:

Fig. 5 XRD patterns of Bi-Ti-O thin films annealed at 800-1000 °C in N\textsubscript{2} atmosphere for 10 min. Bi-Ti-O films was deposited on Si(100) with pulsing ratio of 1:10 (Ti/Bi atomic ratio 0.28). Film thickness was 95 nm.

There is also small correction to the Figure caption 8. The correct caption is:
Figure 8. Backscattering spectra for 900 keV $^3$He ions incident on the $825\cdot10^{15}$ at/cm$^2$ bismuth titanate sample as in Fig.7. For clarity, the insert shows only the depth distributions of Bi and Ti for the as grown and the 1000 °C annealed samples.
